## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-29, and 36-38, drawn to method and apparatus for estimating burn-in time for integrated circuits comprising steps of: forming a plurality of evaluation device structure, a first and second forcing input pad, a first and second sensing output pad, and determining a burn-in time for the integrated circuit, classified in class 324, subclass 760.
  - II. Claims 30-35, drawn to a reliability evaluation test structure to reduce area requirements of the test structure comprising: a plurality of evaluation devices formed on a surface of the substrate such that multiple evaluation devices are placed on the substrate in a stack, classified in class 324, subclass 763.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention of group II does not

require "a first and second forcing input pad to provide a first and second forcing stimulus to at least one of the evaluation device structures; and the first and second sensing output pad connected to sense a first response from at least one of the evaluation device structures" structure as recited in the invention of group I. The subcombination has separate utility such as a particularly a plurality of evaluation devices formed on a surface of the substrate, and they are placed on the substrate in a stack to reduce area requirement of the test structure when formed on a substrate.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
